Subject: RE: Turbine Setbacks

Hi Craig:

I need a few things in order to continue the stormwater review:

- 1) As previously stated to you, I need a watershed map which shows not only the flow path, but also shows the length, slope and distance. The watershed map does not include this information. A review of the watershed information cannot be completed without this map.
- 2) Please provide a hard copy of the output as it is proving difficult to review the electronic copy. A hard copy is therefore requested.

Thanks,

Bill
