bill, please post this video as evidence that turbines do burn. page 52 of the nordex safety regulations says " in case of fire nobody is permitted within a radius of 500 meters". this is just more proof that the setbacks are much to close. thanks bob

Gear oil failures in windmills

Here are some photos of what happens when transmission failures occur in windmills. To date no gear oil has been invented to withstand the pressures produced within these transmissions. Most recently, the government gave Dow-Corning a big grant to work on it. Previously, many others had tried and failed.
