## Four of the Ripley-Five homes bought out by wind developers

Wind Concerns Ontario, [windconcernsontario.wordpress.com](http://windconcernsontario.wordpress.com) 27 April 2011

Suncor and Acciona executives quietly bought out residents experiencing health problems.

“If there are no health effects from Industrial Wind Turbines as their proponents claim, then why would wind plant operators buy the homes of wind victims?”

This is the question being asked by HALT (Huron-Kinloss Against Lakeside Turbines) President Mac Serra. The group recently discovered the sale of four of the five properties previously owned by the families that have been fighting Suncor and Acciona over their inability to lead normal lives in their own homes caused by the Ripley Wind Power Project.

The homes were purchased by 2270573 Ontario Inc. One director for this company listed on the transfer is a manager for Suncor and the other a manager for Acciona.

The victims themselves cannot speak, silenced by a process which leaves the public in the dark over the true extent of the impact caused by industrial wind. “There are over 100 families across Ontario who claim their health is negatively affected by wind development. Many more cannot speak due to confidentiality agreements signed with the wind companies or simply won’t speak up, not wanting to upset their neighbours” said Mac. “MPP Carol Mitchel continues to ignore the health concerns of her constituents and the concerns raised by Dr. Hazel Lynn, Medical Officer of Health for the Grey Bruce Health Unit, preferring to quote Ontario’s Chief Medical Officer of Health’s literature review.” Dr. Hazel Lynn estimates that between 10% and 15% of people living near turbines in her area say their health has been affected.

The group is calling for a full moratorium on all industrial wind development until an independent epidemiological study has been completed. HALT is one of 57 grassroots citizen’s groups across Ontario represented by Wind Concerns Ontario.
